DECLARATION OF GEN AI USE

I.F.G.C. acknowledges the use of Open AI's Chat GPT 5 to generate code over the duration of this project. It was used to:

- Troubleshoot the installation and set up of the AREPO and Gadget packages;
- Resolve errors with Conda installs and environment dependencies;
- Revise and provide documentation for Python3 code initially developed without Gen AI;
- Generate Python3 code that could interpret the hdf5 file type;
- In order to generate Python3 code that adapts, loops or scales initially developed without Gen AI;
- And to trouble shooting various errors, and bugs encountered both in Python3 and tsch/bash.

X.D. acknowledges their use of Open AI's Chat GPT5 and Google's Gemini, over the duration of this project, in the following type of tasks:

- Correcting minor coding mistakes

ACKNOWLEDGMENTS

I.F.G.C. acknowledges the use of python code that was created by or developed with the support of Tom Wagg, David Wang, James R.A. Davenport, Jake Kurlander, and Francisca Chabour Barra.

I.F.G.C. acknowledges conversations with James R.A. Davenport, Eric C. Bellm, Tom Wagg, David Wang, Gio Gollotti and Ryan Krismer for providing insights with regards to formation scenarios, occurrence and frequency of white dwarf-neutron star binaries/collisions and x-ray binaries, and potential for finding such systems observationally.

I.F.G.C acknowledges David Wang and Tom Wagg for providing insight on how binary evolution affect outcomes of stellar evolution and can result in COWD-NS binary.

I.F.G.C. acknowledges Francisca Chabour Barra and Liam Becker for their helpful recommendations on papers.

I.F.G.C. acknowledges support from the DiRAC Institute in the Department of Astronomy at the University of Washington. The DiRAC Institute

I.F.G.C. acknowledges the Institute for Data Intensive Research in Astrophysics and Cosmology (DiRAC Institute), which is supported through generous gifts from the Charles and Lisa Simonyi Fund for Arts and Sciences and the Washington Research Foundation, and the University of Washington's Physics and Astronomy Computing Services (PACS) for the use of their Helios-Arnor cluster and Helios-Gondor clusters

X.D. and I.F.G.C acknowledge their use of a pre-ran AREPO simulation, as provided by Javier Moran Fraile
